

ABSTRACT OF THE DISCLOSURE

A detachable bicycle is disclosed. The bicycle comprises a front frame section comprising a joint tube at a rear end of the crossbar; a rear frame section comprising a sleeve extended forward, obliquely from the bottom 5 bracket for receiving a lower portion of the down tube, and a seat tube extended upward from the bottom bracket to have its upper portion inserted into the joint tube wherein the seat tube is substantially perpendicular with respect to the down tube; and a seat post inserted through the joint tube into the seat tube. The seat post and the seat tube 10 are secured to the joint tube by means of a first quick release and a second quick release respectively. The down tube is secured to the sleeve by means of a third quick release.
